

## Killininny Church Project Feature

### Architect's Testimonial

"The louvres in terms of finish and installation have turned out very well and have contributed positively to the overall success of the project. The box screen profile is something we would certainly look at using again in future projects".

*Vertical 40x40 Box Profile Louvre supplied and installed for Mclnerney Contracting Ltd*

*Box profile by Architectural & Metal Systems, Cork- Bronze Anodise Finish by LHT, London*

Construction Design Details

The decorative louvre screen to the curved head gable wall was designed and manufactured by QEF Ltd to achieve the specific vertical box feature required by McCauley Daye O'Connell Architects as part of the overall design for this new church. The challenge was to deliver an essentially bespoke design requiring close tolerance spacing within a limited budget. This was achieved by utilising in-house profiles and connection techniques together with a new box blade extrusion.
